

1. Which of the following technique is used for the separation of insoluble particles from liquids?

- A. Filtration
- B. Crystallization
- C. Solvent extraction
- D. Chromatography

**Answer:** Option A

---

2. Which of the following way in used for classification of chromatography?

- A. Shape
- B. Phase
- C. Mechanism
- D. All

**Answer:** Option D

---

3. Fluted filter paper is used to

- A. Filter hot solution
- B. Avoid premature crystallization
- C. Increase the rate of filtration
- D. Decrease the area

**Answer:** Option C

---

4. Safe and the most reliable method of drying crystals is through

- A. Filter paper
- B. Vacuum desiccators
- C. Oven
- D. None of these

**Answer:** Option B

---

5. A substance having very high vapour pressure at its melting point on heating will show

- A. Melting
- B. Sublimation
- C. Decomposition
- D. Condensation

**Answer:** Option B

6. A process controlled by Distributive law is
- A. Crystallization      B. Sublimation  
C. Solvent extraction      D. Filtration

**Answer:** Option C

- 
7. A technique of partition chromatography in which the solvent is in a pool at the bottom of container
- A. Adsorption chromatography      B. Ascending chromatography  
C. Radial chromatography      D. Descending chromatography

**Answer:** Option B

- 
8. Different components of a mixture have different Rf values due to
- A. Polar solvent used      B. Combination of solvents used  
C. Their different distribution coefficients in the solvent      D. Distributive law

**Answer:** Option C

- 
9. Branch of chemistry that deals with the complete qualitative and quantitative analysis of a substance is
- A. Stoichio chemistry      B. Physical chemistry  
C. Analytical chemistry      D. Quantum chemistry

**Answer:** Option C

- 
10. Identification of the components of a sample is
- A. Quantitative analysis      B. Qualitative analysis  
C. Stoichiometry      D. Physical chemistry

**Answer:** Option B
