7. If the surface area of a sphere is 616 square cm , what is its volume?

4312/3 cubic cm
4102/3 cubic cm
1257 cubic cm
1023 cubic cm
Answer (a)
$4 \pi \mathrm{r}^{2}=616$
or $4 \times 22 \times \mathrm{r}^{2} / 7=616$
$\Rightarrow \mathrm{r}=7$
Volume of sphere $=\frac{4 \pi r^{3}}{3}=\frac{4 \times 22 \times 7^{3}}{3 \times 7}=\frac{4312}{3}$
$\mathrm{V}=4 / 2 \times 22 / 7 \times 7 \times 7 \times 7=4312 / 3 \mathrm{~cm}^{3}$
8. The surface area of a sphere is 616 square cm . If its radius is changed so that the area gets reduced by $75 \%$, then the radius becomes
1.6 cm
2.3 cm
2.5 cm
3.5 cm

## Answer (d)

New area $=25 \%$ of original area
or $4 \pi \mathrm{r}^{2}=1 / 4 \times 616$
or $4 \pi r^{2}=154$
or $4 \times 22 \times \mathrm{r}^{2} / 7=154$
or $\mathrm{r}^{2}=49 / 4=(7 / 2)^{2}$
Therefore $\mathrm{r}=7 / 2$ or 3.5 cm
9. If the diameter of a sphere is doubled, how does its surface area change?

It increases two times
It increases three times
It increases four times
It increases eight times.

## Answer (d)

If the diameter is doubled radius is also doubled
$\frac{\mathrm{V}_{2}}{\mathrm{~V}_{1}}=\frac{\left(4 \times \pi(2 \mathrm{r})^{3}\right) / 3}{\left(4 \times \pi(\mathrm{r})^{3}\right) / 3}=\frac{8 \mathrm{r}^{3}}{\mathrm{r}^{3}}=8$
$\therefore \mathrm{V}_{2}=8 \mathrm{~V}_{1}$
10. A sphere is inscribed in a cubical box such that the sphere is tangent to all six faces of the box. What is the ratio of the volume of the cubical box to the volume of sphere?
$6 \pi$
$36 \pi$
$4 \pi / 3$
$6 / \pi$
Answer (d)
Diameter of sphere $=$ side of cube $=s$
$\therefore$ radius of the sphere $\mathrm{r}=\mathrm{s} / 2$
$\frac{\mathrm{V}(\text { cube })}{\mathrm{V}(\text { sphere })}=\frac{s^{3}}{\left(4 \pi(\mathrm{~s} / 2)^{3}\right) / 3}=\frac{24 \mathrm{~s}^{3}}{4 \pi \mathrm{~s}^{3}}=\frac{6}{\pi}$
11. What is the number of wax balls, each of radius 1 cm , that can be molded out of a sphere of radius 8 cm ?

256
512
768
1024
Answer (b)
Volume of 1 sphere with radius $8 \mathrm{~cm}=$ volume of n spheres with radius 1 cm
$\frac{\mathrm{nx} 4 \pi \times(1)^{3}}{3}=\frac{4 \times \pi \times 8^{3}}{3}$
$\Rightarrow \mathrm{n}=512$
