

18. The inner and outer radii of a 7 m long hollow iron right circular cylindrical pipe are 2 cm and 4 cm respectively. If 1000 cm^3 of iron weighs 5 kg, what is the weight of the pipe?

264 kg

132 kg

396 kg

None of the above

Answer (b)

$$\begin{aligned}\text{Volume of the iron rod} &= \text{External volume} - \text{Internal volume} \\ &= 700 \times \pi(4^2 - 2^2) \text{ cm}^3 \\ &= (700 \times 22 \times 12 \text{ cm}^3)/7 \\ &= 26400 \text{ cm}^3 \\ &= 26.4 \times 1000 \text{ cm}^3 \\ &= 26.4 \times 5 \text{ kg} = 132 \text{ kg}\end{aligned}$$

19. A container is in the form of a right circular cylinder surmounted by a hemisphere of the same radius 15 cm as the cylinder. If the volume of the container is $32400\pi \text{ cm}^3$, then the height h of the container satisfies which one of the following?

135 cm $< h <$ 150 cm

140 cm $< h <$ 147 cm

145 cm $< h <$ 148 cm

139 cm $< h <$ 145 cm

Answer (a)

Volume of the container
= Volume of the cylinder + Volume of the hemisphere
 $\Rightarrow \pi 15^2 h + \frac{2\pi 15^3}{3} = 32400\pi$
 $\Rightarrow \pi 15^2 (h + 10) = 32400\pi$
 $\Rightarrow h + 10 = \frac{32400}{225} = 144$
 $\Rightarrow h = 134$
 \therefore the height of the container = $134 + 15 = 149$ cm
Which satisfies $139 \text{ cm} < h < 145 \text{ cm}$.

20. A cylindrical can of internal diameter 24 cm contains water. A solid sphere of radius 6 cm is completely immersed in water in the cylinder. The water level increases by

0.25 cm

0.5 cm

2 cm

3 cm

Answer (c)

Volume of water increased = Volume of the solid sphere
 $= \frac{4\pi 6^3}{3} = 288\pi \text{ cm}^3$

If the increase in water level is h cm, then

$$\pi 12^2 h = 288\pi$$

$$\Rightarrow h = 2 \text{ cm.}$$

21. From a cylindrical log whose height is equal to its diameter, the greatest possible sphere has been taken out. What is the fraction of the original log which is cut away?

1/2

1/3

1/4

2/3

Answer (d)

Volume of the cylindrical log

$$= \pi r^2 h \text{ where } h = 2r$$

$$= \pi r^2 2r = 2\pi r^3$$

The radius of the greatest possible sphere = r

Therefore, the volume of this sphere = $\frac{4\pi r^3}{3}$

\Rightarrow this volume is $\frac{4\pi r^3}{3} \div 2\pi r^3 = \frac{2}{3}$ of the volume of the cylindrical log

22. A cylindrical vessel of base radius 14 cm is filled with water to some height. If a rectangular solid of dimensions 22 cm x 7 cm x 5 cm is immersed in it, what is the rise in water level?

0.5 cm

1.0 cm

1.25 cm

1.5 cm

Answer (c)

Volume of the rise of water in the cylindrical vessel = volume of the rectangular solid immersed

If h is the rise in water level

$$\pi 14^2 h = (22 \times 7 \times 5) \text{ cm}^3$$

$$\Rightarrow h = 22 \times 7 \times 5 / \pi \cdot 14 \times 14 \text{ cm}$$

$$\Rightarrow h = 770 / 196\pi = (770 \times 7) / 196 \times 22 = 1.25 \text{ cm}$$

23. A lead pencil is in the shape of a cylinder. The pencil is 21 cm long with radius 0.4 cm and its lead is of radius 0.1 cm. What is the volume of wood in the pencil?

$$9 \text{ cm}^3$$

$$9.4 \text{ cm}^3$$

$$9.9 \text{ cm}^3$$

$$10.1 \text{ cm}^3$$

Answer (c)

Volume of the wood

= volume of the pencil - volume of the lead

$$= [\pi(0.4)^2 21 - \pi(0.1)^2 \times 21] \text{ cm}^3$$

$$= \pi \times 21 (0.16 - 0.01) \text{ cm}^3$$

$$= 66 \times 0.15 \text{ cm}^3 = 9.9 \text{ cm}^3$$

24. A hollow cylindrical iron pipe of length 1.4 m has bore radius 2.5 cm and thickness of the metal is 1 cm. What is the volume of the iron used in the pipe?

$$2640 \text{ cm}^3$$

$$2604 \text{ cm}^3$$

$$2460 \text{ cm}^3$$

None of the above

Answer (a)

Length of the pipe = 140 cm

Internal radius = 2.5 cm

External radius = 3.5 cm

Volume of the pipe

$$= \pi (3.5 \times 3.5 - 2.5 \times 2.5) \times 140 \text{ cm}^3$$

$$= 2640 \text{ cm}^3$$
