Read the below passage and answer the questions that follows:

'Free will' is a philosophical term for a particular sort of capacity of rational agents to choose a course of action from among various alternatives. Philosophers have debated this question for two millennia. Most philosophers suppose that the concept of free will is closely connected to the concept of moral responsibility. Acting with free will is just to satisfy the metaphysical requirement of being responsible for one's actions. Free will also appears to be a condition for one's

accomplishments, showing why sustained effort and creative work are praiseworthy. Free will also affects the value we accord to love and friendship. Philosophers who distinguish between freedom of action and freedom of will do so because our success depends in part on factors wholly beyond our control. There are always external constraints on the range of options we can try to undertake. The presence or absence of these constraints are not within our power.

Read the below passage carefully and answer the question that follow.

ON A FRIGID AFTERNOON in February 2012, a pair of hunters stalking sika deer along the Krounovka River in Russia's remote Primorsky province were halted by an unusual sight: a four-month-old Amur tiger cub lying on her side in the snow. Her eyes were glazed and distant, her breathing shallow. The cat clearly had not eaten in days, and the tip of her tail was black with frostbite. The hunters carted her to the home of Andrey Oryol, a local wildlife inspector.

Oryol made an enclosure for the tiger who was eventually given the name Zolushka, and fed her meat, eggs and warm milk. After a few days, the tiger cub's vitals has stabilized; after two weeks, she was pacing restlessly. Heartened, Oryol reached out to Dale Miquelle, the director of the Russia Program of the wildlife Conservation Society (WCS), an American non-profit. Miquelle arrived at Oryol's house with Sasha Rybin, a WCS colleague. Immediately, Zolushka began to snarl. Adolescent tigers, despite their relatively small stature-Zolushka was about the size of a golden retriever-are dangerous animals, with sharp claws and teeth. Miquelle used a stick to distract her while Rybin jabbed her with a tranquilizer dart. Once she had collapsed, a pair of local veterinarians amputated the necrotic tip of her tail.

Bandaged and sedated, Zolushka was moved to the center for the Rehabilitation and Reintroduction of Tigers and other Rare Animals, some 65 kilometers to the south in Alekseevka.

Opened months earlier by a coalition that included the Russian Geographical Society and the government-funded group Inspection Tiger, the Alekseevka centre spilled over eight acres thick with brush and vegetation. "There were two main goals," Miquelle recalled. "Don't let the animal get acclimated to humans. And teach her to hunt."

If Orphaned cubs could be rehabilitated to the point of mating with wild tigers, they would not only provide a boost in the local population but, in the aggregate, perhaps reclaim regions that hadn't seen healthy tiger communities in decades. Beyond that, the hope was to establish a model that scientists in other countries could perhaps one day duplicate.

Zolushka was the first tiger to arrive at Alekseevka. In the early months she was fed primarily meat, dumped into the enclosure through one of the slots in the fencing. In the summer of 2012 Zolushka was presented with rabbits-fast, but ultimately defenceless. The next step was wild boar. It seemed at first to confuse her. "It was like a kid trying to figure out a puzzle," says Miquelle.

In May 2013, a little more than a year after she arrived at the Alekseevka centre, the decision was made to set Zolushka free.
