Directions: Read the passage carefully and answer the questions that follow.

Finland's education system boasts of giving hardly any homework to its kids. In fact most kids believe that they can complete their homework in less than half an hour. The teachers and the principals support this lack of homework as they believe that students have other things to do which are equally important. Sports, socialising, being with family and even exploring their backyard are considered to be very important in a student's life.

Finnish students spend the least amount of time in school than students from other parts of the world. On average Finnish students only spend three hours and forty five minutes in school which includes lunch time. This is again supported by the fact that students have a life outside school. It is stated by Finnish teachers that students have to learn and not study and hence **socialisation**, sports, exploration etc. are part of learning.
