Directions: Read the passage carefully and answer the questions that follow.

The animals that live in a specific region are what we call the wildlife of the region. Just as vegetation is the flora, wildlife is the fauna of a region. It includes all the animals, birds, insects etc. of the region.

The diversity of wildlife in the world is unimaginably large. There are said to be about 1 to 2 million species of animals on the planet! And India in particular boasts of an incredible wildlife presence. Our national animal, the tiger is one such rare animal found in India. In fact, the Bengal tiger can be found nowhere else on earth. We also have the Asiatic Lion, the only species of lions found outside Africa.

To preserve these amazing animals and their natural habitats, we have many conservatories, national parks and wildlife sanctuaries. In recent times to bring down illegal hunting and poaching the Indian government has passed some very strict laws as well.
