Directions: Read the passage carefully and answer the questions that follow.

India's invitation to Chinese telecom giant Huawei Technologies—a company banned in the US, which has termed it a cyber security threat, and from building 5G networks in Australia and New Zealand—to participate in 5G trials has aroused some concern in security and technology establishments.

Little has changed over the past decade. India still doesn't have sufficient safeguards in the telecom sector, which forms the backbone of the digital economy. The only thing that has changed is the technology standard – back then, the fear was of Chinese 3G equipment fitted with spyware; now it is Chinese 5G equipment.

Experts point out two ways that governments can adopt to guard against the perceived security threat. One, set up auditing infrastructure to test and identify **vulnerability** in the telecom equipment before deploying it in the country. Two, develop the capacity to manufacture critical hardware components within the country. India has not made progress on either front, officials say.
