Passage questions (6-10)

Read the passage and answer the questions that follow:

Dan Cahil thought he had the most annoying big sister on the planet. And that was before she set fire to two million dollars.

It all started when they went to their grandmother's funeral. Secretly, Dan was excited, because he was hoping to make a rubbing of the tombstone after everyone else was gone. He figured Grace wouldn't care. She'd been a cool grandmother.

Dan loved collecting things. He collected baseball cards, autographs of famous outlaws, Civil War weapons, rare coins, and every cast he'd ever had since kindergarten (all twelve of them). At the moment, what he liked collecting best were charcoal rubbings of tombstones. He had some awesome ones back at the apartment.

Passage questions (32 -36)

Read the following passage and answer the questions given below:

Adolescents differ from adults in the way they behave, solve problems, and make decisions. There is a biological explanation for this difference. Studies have shown that brains continue to mature and develop throughout childhood and adolescence and well into early adulthood. Scientists have identified a specific region of the brain called the amygdala that is responsible for immediate reactions including fear and aggressive behavior. This region develops early. However, the frontal cortex, the area of the brain that controls reasoning and helps us think before we act, develops later. This part of the brain is still changing and maturing well into adulthood. Pictures of the brain in action show that adolescents' brains work differently than adults when they make decisions or solve problems. Their actions are guided more by the emotional and reactive amygdala and less by the thoughtful, logical frontal cortex. Research has also shown that exposure to drugs and alcohol during the teen years can change or delay these developments. These brain differences don't mean that young people can't make good decisions or tell the difference between right and wrong. It also doesn't mean that they shouldn't be held responsible for their actions.

32) Adolescents actions are guided more by

- A) the emotional and reactive amygdala
- B) the thoughtful, logical frontal cortex
- C) drugs that support their amygdala
- D) the developed and more supportive brain

33) The biological explanation for adolescent behaviour is that they are

- A) addicted to drugs and alcohol and so the seat of reasoning is impaired
