Q2895562 Two new bloom-forming algal species were discovered recently off the west coast of India. These two species have excellent carbon capture properties – ability to absorb carbon dioxide from the atmosphere and reduce global warming – and are also promising candidates for use as bio fuels. Currently, a number of research groups are working on using algae as a potential candidate for carbon sequestration because they grow at very high rates and can absorb atmospheric CO. Both of the newly discovered species are endemic and bloom-forming. As they are endemic, their cultivation is not going to cause any environmental harm; had it been a species of Atlantic or Mediterranean origin, it might overgrow local flora and might wreak havoc on the local habitats – the so-called bio invasion.

Bloom forming indicates spontaneous growth. There is no need for fertilizers/pesticides or any expensive cultivation systems such as photobioreactors for their cultivation. These can grow sporadically at shorelines and can sequester CO. The algae species named *Ulva paschima* Bast, and *Cladophora goensis* Bast were discovered by Dr. Felix Bast and two research students working with him, Mr. Satej Bhushan and Mr. Aijaz Ahmad John, from the Central University of Punjab, Bhatinda. The findings were reported in the journals *PLoS ONE* and *Indian Journal of Marine Sciences*.

The main criteria used for determining these species as newly discovered is a mix of morphological as well as molecular characteristics. Molecular evidence is especially strong; as nearest match is less than 90 per cent sequence identity. For example, *Cladophora goensis* Vs. *Cladophora glomerata* – its nearest match – is 17.7 per cent differences. "Compare it with human Vs. chimp. Our sequence identity is 98 per cent and 2 per cent difference makes us what we are. These newly discovered algae have profound sequence differences from previously discovered algae. Morphology is not reliable; as algae can change its morphology to suit its environment. Ours is the first molecular study on Indian algae, and first algal species discovery for last 40 years," notes Dr. Bast.

Pharmaceutical products from algae are under the realms of another project by Dr. Bast. A number of active substances are isolated from algae including some algae of genera *Cladophora* and *Ulva*. Probably most famous is Kahalalide-F, which is now being used in clinical trials against prostate and breast cancers. Kahalalide-F is isolated from *Bryopsis* – a closely related green algae to *Cladophora* as well as *Ulva* and it is very probable that same or related chemical is present in newly discovered endemic algae. He intends to work on this. *Cladophora goensis* and *Ulva paschima* – recently discovered species – have had no chemical/pharmaceutical studies conducted on them yet.

Q2895564 Pick out the synonym of 'sequester' as used in the passage.

Score Obtained : 1.0 / 1.0

- A) Filter
B) Isolate
C) Pick
D) Absorb

Q2895566 What are the most essential properties of these two species?

- i. They have the ability to absorb CO₂ from the atmosphere
ii. They reduce global warming
iii. They are promising candidates for use as bio-fuels
iv. They are not potential candidates for carbon sequestration

Score Obtained : 1.0 / 1.0

- A) i and ii
B) i, ii and iii
C) i and iii
D) ii and iii

Q2895563 Where were the two new bloom-forming algal species recently discovered?

Score Obtained : 1.0 / 1.0

- A) Shorelines of Bhatinda
B) Mediterranean Sea
C) Atlantic coast
D) West coast of India

Q2895565 What were the main criteria used for determining these species as newly discovered ones?

Score Obtained : 1.0 / 1.0

- A) Depending solely on molecular characteristics
B) Relying on morphological characteristics alone
C) Mixing morphological and molecular characteristics
D) Sequencing the differences from previously discovered algae

Q2895567 Which of the following statements with regard to the newly discovered species is FALSE?

- A) They can grow sporadically at shorelines
 B) Their cultivation does not cause any damage to environment
 C) They are endemic and bloom-forming
D) They need fertilizers or pesticides for their cultivation

Q2894976 Choose the correct option for the indirect speech of the given sentence.
