Passage:

The questions are based on a short passage. Read the passage below to answer the questions. Choose the correct answer from the 4 listed choices.

If green energy is ever to supplant fossil fuels, portable power needs to become more efficient and cheaper. Yet as electronic goods become both more powerful and smaller, batteries are struggling to keep pace. In large part, that's because it's increasingly difficult to pack ever more energy into lightweight lithium-ion batteries while also making them less expensive.

According to Venkat Srinivasan, a leading battery scientist, "A lot of car companies are producing electric cars that have a range of 200 miles. Costs have dropped, but the biggest problem they're facing is that the cost of their batteries is still too high".

One area being explored is solid-state devices, in which the liquid-electrolyte batteries are replaced by solids. For one thing, such devices are safer, Srinivasan says. While liquid lithium-ion batteries can ignite rapidly if they overheat, the more stable solid state versions under investigation represent a return to the past, albeit with a rechargeable twist.

Trying to recharge these solid-state batteries causes the lithium to form dendrites—needle-like structures—that end up short-circuiting the battery, which can heat it up and cause fires. To figure out how to get around the problem, it helps to think of dendrites like the roots of a tree.

A few years ago, researchers in Japan identified sulfite-based glass materials that not only were strong enough to resist the dendrites but also have very high conductivity. These might offer a way around the problem and help to develop rechargeable solid-state lithium batteries.

Passage:

Question ID:8011

Topic Name:SECTION-I English Language

Question: According to the above passage, when will green energy supplant fossil fuels?

A When lithium batteries become of low conductivity.

- B When lithium batteries become less efficient and cheaper.
- C When portable power becomes more efficient and cheaper.
- D When portable power becomes less efficient and cheaper.

Correct Answer

Answer Given By Candidate: Not Attempted

Question ID: 8012

Question:

Which of the following can be inferred about solid-state devices based on the given passage?

- A Solid-state devices are the devices where solid-electrolyte batteries are replaced by liquids.
- B Solid-state devices are the devices where liquid-electrolyte batteries are replaced by solids.
- C Solid-state devices are the devices where liquid-electrolyte batteries are replaced by other liquids.
- D Solid-state devices are the devices where solid-electrolyte batteries are replaced by other solids.

Correct Answer

Answer Given By Candidate: B

Question ID: 8013

Topic Name: SECTION-I English Language

Question:

Which of the following can be inferred based on the given passage?

- A Recharging solid-state batteries causes the lithium to form dendrites that end up short-circuiting the battery. It can also heat up the battery and cause fires.
- B Recharging solid-state batteries drains the battery easily. It can also heat up the battery and cause fires.
- C Recharging solid-state batteries causes it to store more energy which in turn explodes.
- D Recharging solid-state batteries causes it to form dendrites under high density and emit harmful radiations.
